Selesaikan kasus berikut ini
CASE 1 — Perhitungan Zakat Mal

Program menerima:

- Total harta
- Nilai nisab

Jika:

Harta >= Nisab

maka:

$Zakat = Harta \times 2,5\%$

Jika belum mencapai nisab, program menampilkan:

"Harta belum mencapai nisab."

CASE 2 — Sistem Parkir Kampus

Program menerima:

- Jenis kendaraan
- Lama parkir

Tarif:

Kendaraan	Tarif awal	Tarif tambahan
Motor	Rp2.000	Rp1.000/jam
Mobil	Rp5.000	Rp2.000/jam

Program menghitung total biaya parkir.

CASE 3 — Permainan Tebak Angka

Komputer memilih angka acak 1–100.

Pemain melakukan tebakan.

Program memberikan petunjuk:

Terlalu kecil

Terlalu besar

Benar

Program juga menghitung jumlah percobaan.

Challenge: batasi jumlah percobaan menjadi 7 kali.

JAWABAN ANDA

1. SYSTEM ZAKAT MAL

2. SYSTEM PARKIR KAMPUS

3. SYSTEM GAME TEBAK TEBAKAN ANGKA

The image displays a Java IDE environment with two main windows. The top window, titled "Output - Run (GameTebakAngka) x", shows the execution output of a Java program. The output includes the command used to run the program, the building process, and the game's execution. The game logic is as follows: it generates a random number between 1 and 100, prompts the user to guess, and provides feedback (too high, too low, or correct) after each guess. The game ends when the user guesses correctly or after 7 attempts. The bottom window, titled "GameTebakAngka - Flowgorithm", shows a flowchart that implements the game's logic. The flowchart starts with a "Main" block, followed by a "Random Number" block, a "Attempts" block, and a "Guess" block. It then enters a loop where it checks if the guess is correct. If correct, it outputs "Berhasil menebak" and ends. If incorrect, it checks if the number of attempts is less than 7. If yes, it provides feedback and increments the attempts. If no, it outputs "Gagal menebak" and ends. The flowchart uses standard flowchart symbols: rectangles for processes, diamonds for decisions, and parallelograms for input/output.

```
graph TD
    Start([Start]) --> Main[Main]
    Main --> Random[Random Number]
    Random --> Attempts[Attempts = 0]
    Attempts --> Guess[Guess]
    Guess --> Correct{Is guess correct?}
    Correct -- True --> Success[Output: Berhasil menebak]
    Correct -- False --> AttemptsLess7{Attempts < 7?}
    AttemptsLess7 -- True --> Feedback[Output: Too high / Too low]
    Feedback --> AttemptsPlus1[Attempts = Attempts + 1]
    AttemptsPlus1 --> Guess
    AttemptsLess7 -- False --> Failed[Output: Gagal menebak]
    Failed --> End([End])
```

A screenshot of a Scratch console window. The title bar says "Console". The toolbar includes icons for messages, stop, zoom in, zoom out, save, copy, paste, play, step through, single step, and a grey square. The console area shows a sequence of messages in green speech bubbles: "Percobaan Ke-6 | Masukan Tebakanmu:", "Kegedean Angkamu, Try Again", "Percobaan Ke-7 | Masukan Tebakanmu:", "Kegedean Angkamu, Try Again", "YEKKK KALAH", and "Angka yang bener itu : 27". On the right side, there are two blue speech bubbles with the numbers "50" and "40". At the bottom, there is a large empty text input field and a button with an upward-pointing arrow.
